Clinically researched prediabetes formulation

Prediabetes can benefit from blood glucose management*

Prediabetes is not a single condition, rather it is a group of conditions that affect the metabolism of carbohydrates and result in high blood sugar levels. Effective management of prediabetes must address the cyclical interaction of blood glucose levels with insulin sensitivity, inflammation levels and oxidative stress. Eriomin addresses the need to manage these interrelated health concerns through its multi-functional biomechanisms.*

Eriomin provides triple functionality

Unlike other ingredients, Eriomin takes a unique multi-functional, integrated approach to prediabetes management. Eriomin's triple-pronged functionality:

- Supports healthy blood glucose levels*
- Maintains healthy inflammation response*
- Promotes strong antioxidant activity.*

Proprietary blend of lemon flavonoids

Eriomin's proprietary blend is primarily composed of Eriocitrin. Eriocitrin has been clinically shown to support healthy blood glucose function, generate potent antioxidant activity and help manage inflammation within the healthy range.* The Eriocitrin in Eriomin is of the highest purity available and extracted from mature lemon fruit at various maturity stages for a more potent extract.

Eriomin has been clinically tested

Eriomin's standardized blend was studied in a gold standard, randomized, first-of-a-kind, double-blind human clinical trial on blood glucose management. Study results indicate that Eriomin helped subjects maintain glycemic control within healthy parameters.

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Eriomin clinical trial results

All subjects that supplemented with Eriomin showed markers of increased glucose tolerance and successful multi-pronged prediabetes management. 24% returned to normal fasting glycemia after only 12 weeks of intervention.*

What structure function claims can Eriomin products make?

The claims provided below are for informational purposes only and should be reviewed by your legal counsel.

- Helps maintain blood glucose levels within the normal range.*
- Helps support normal insulin sensitivity.*
- Helps manage a healthy inflammation response.*
- Supports healthy cell function through increased antioxidant activity.*

Why choose Eriomin?

- Clinically proven for blood glucose management in a human clinical trial
- Addresses multiple, interdependent functions
- Utilizes proprietary extraction process
- Versatile powder for use in capsules, blends and tablets
- Suspensible in beverages with a neutral flavor profile for foods
- Patent protected
- Backed by Ingredients by Nature
